General Caution

1. NJRC strives to produce reliable and high quality microwave components. NJRC's microwave components are intended for specific applications and require proper maintenance and handling. To enhance the performance and service of NJRC's microwave components, the devices, machinery or equipment into which they are integrated should undergo preventative maintenance and inspection at regularly scheduled intervals. Failure to properly maintain equipment and machinery incorporating these products can result in catastrophic system failures.

2. To ensure the highest levels of reliability, NJRC products must always be properly handled. The introduction of external contaminants (e.g. dust, oil or cosmetics) can result in failures of microwave components.

3. NJRC offers a variety of microwave components intended for particular applications. It is important that you select the proper component for your intended application. You may contact NJRC's sales office or sales representatives, if you are uncertain about the products listed in the catalog and the specification sheets.

4. Special care is required in designing devices, machinery or equipment, which demand high levels of reliability. This is particularly important when designing critical components or systems whose foreseeable failure can result in situations that could adversely affect health or safety. In designing such critical devices, equipment or machinery, careful consideration should be given to, amongst other things, their safety design, fail-safe design, back-up and redundancy systems, and diffusion design.

5. The products listed in the catalog and specification sheets may not be appropriate for use in certain equipment where reliability is critical or where the products may be subjected to extreme conditions. You should consult our sales office or sales representatives before using the products in any of the following types of equipment.
   * Aerospace Equipment
   * Equipment Used in the Deep Sea
   * Power Generator Control Equipment (nuclear, steam, hydraulic)
   * Life Maintenance Medical Equipment
   * Fire Alarm/Intruder Detector
   * Vehicle Control Equipment (automobile, airplane, railroad, ship, etc.)
   * Various Safety Equipment

General Caution (continued)

6. NJRC's products have been designed and tested to function within controlled environmental conditions. Do not use products under conditions that deviate from methods or applications specified in the catalog and specification sheets. Failure to employ NJRC's products in the proper applications can lead to deterioration, destruction or failure of the products. NJRC shall not be responsible for any bodily injury, fires or accidents, property damage or any consequential damages resulting from the misuse or misapplication of its products. PRODUCTS ARE SOLD WITHOUT WARRANTY OF ANY OF KIND, EITHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

About This Instruction Manual

This instruction manual describes Ku-band 8W BUCs (Model No.: NJT8318 series) herein referred to as "the Unit".

This instruction manual provides information and instructions for installation and operation of the Unit.

This instruction manual is intended for use by trained field installers or system engineers responsible for satellite networks.

Updated instruction manual may be available from NJRC's sales group mcsales@njr.co.jp.

Contents

1. Introduction

This instruction manual is for Ku-band 8W BUCs (Model No.: NJT8318 series) .

The Unit receives a reference signal (10 MHz) and an IF signal (L-Band: 950 to 1,450 MHz or 950 to 1,700 MHz) input and transmits an RF signal (Standard Ku-band: 14.0 to 14.5 GHz or Universal Ku-band: 13.75 to 14.5 GHz) output.

The Unit comes in a single, weatherized housing rated for outdoor use. The Unit has either an N-Type or a F-type female connector input, a WR75 waveguide with grooved flange output, and optional MS connector for DC power input. The Unit is operated by both +24 and +48 V DC power (Range: +18 to +60 V) input.

The Unit has the function of Monitor and Control which is complied with FSK communication and RS-232C interfaces

The Unit has the following line-up:

Model No.	RF Frequency	Local Frequency	IF Frequency	Output Power @ P1dB	IF Connector	Port for Voltage Input	Power Supply	M&C Option
NJT8318N	14.0 to 14.5GHz (Standard Ku-band)	13.05 GHz	950 to 1,450 MHz	8W Linear (+39dBm min.)	N-type	Same as IF Connector	+18 to +60 V DC Power	N/A

2. Safety Instructions

Use the following safety guidelines to help protect the Unit from potential damage and to help ensure your own personal safety.

DANGER, WARNING, CAUTION, and NOTE Statements

DANGER, WARNING, CAUTION, and NOTE statements are used throughout this instruction manual to emphasize important and critical information. You must read these statements to help ensure safety and to prevent product damage. The statement are defined below.

Statement	Symbol	Description
DANGER		DANGER indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.
WARNING		WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.
CAUTION		CAUTION indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury. CAUTION may also be used to indicate other unsafe practices or risks of property damage.
NOTE		NOTE is used to notify of installation, operation, or maintenance information that is important, but not hazard-related.

Symbol	Description
	GENERIC HAZARD
	ELECTRIC HAZARD
	HOT SURFACE
	MOVING PARTS

When installing the Unit, observe the following safety guidelines.

2.1. Safety Statements

1. Opening / Removing

DO NOT dismantle this product.
Dismantlement may cause malfunction and electric shock.

2. Input Voltage

Only input a voltage within the range indicated in specified voltage.
DO operate at the input voltage of +18 to +60 V DC power.

3. RF Radiation

A radiation hazard exists if the BUC is operated with its RF signal output unterminated.
DO NOT operate the BUC without a load or termination attached to the RF signal output.

4. High Temperatures

DO NOT touch the body, especially fins, during operating the Unit.
High touch temperatures may exist, depending on load conditions.

5. Fan

DO NOT insert your finger into the fan to avoid injury.

DO NOT insert any objects into the fan. Keep any objects away from the fan.
Incorrect usage may cause injury to self or others.

6. Input Level

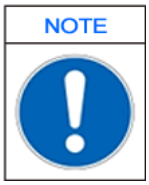
DO NOT input an IF signal over the range of +13 dBm maximum and a reference signal within the range of -5 to +5 dBm.

7. Operating Temperature.

Operate the Unit within the ambient temperature range of -40 to +75 degree C, but the performance guarantee temperature range is -40 to +55 degree C.

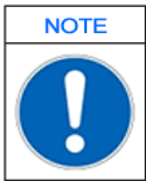
2.2. Instruction Statements

1. Mounting



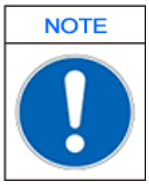
DO NOT block the fins and air flow.
Normally the Unit should be mounted with fan face down.

2. Connector



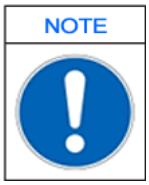
When attaching cable, DO tighten as connector with following torque:
N-type connector, 0.68 to 1.13 N・m
F-type connector, 0.39 to 0.49 N・m

3. Weatherproof



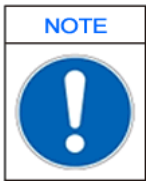
The Unit is mounted outdoors must be adequately weatherproofed.
Ensure the waveguide joints are properly sealed with the supplied o-ring (gasket). Use self-amalgamating tape to seal connectors and cable entry points from the connector to the

4. Fan



The fan has its lifetime. The fan is to be replaced with a new one at appropriate interval.
The recommendation interval of replacement is five years.

5. Warranty



Opening or removing any component (e.g. label, and screws) without fan equipments or sealed area will immediately void the warranty.

3. Packing List

The Unit is shipped in a single shipping container with the following content:

4. Overview

The Unit transmits an RF signal (Universal Ku-band: 13.75 to 14.5 GHz / Standard Ku-band: 14.0 to 14.5 GHz) output with up to 8W (+39 dBm) linear.

The unique features are

- High Temperature Operating:
  - * Operation Guarantee Temperature Range: -40 to +75 degree C
- RF Frequency Line-up:
  - * Universal Ku-band: 13.75 to 14.5 GHz
  - * Standard Ku-band: 14.0 to 14.5 GHz
- High Efficiency & Low Distortion.
  - * P1dB: +39 dBm min. over temperature
  - * IM3: -28 dBc @ Pout = +36 dBm
  - * Power Consumption: 80 W typ.
- Monitor & Control Line-up
  - * FSK Communication M&C
  - * RS-232C Interface Serial M&C
- Smaller Size & Lighter Weight
  - * Dimension: 180 (L) x 130 (W) x 80 (H) mm
  - * Weight: 2.4 kg
- LED Indicator
- RoHS Compliance

*1: MS Connector models are available to apply DC voltage via Circular Connector (MS Connector) or N-/F-type Female Connector.

DO NOT apply DC voltage via both Circular Connector (MS Connector) and N-/F-type Female Connector.
If DC voltage is applied on both connectors, it may damage the unit or the unit may not operate properly.

6. Installing

This section describes basic installation for the Unit.

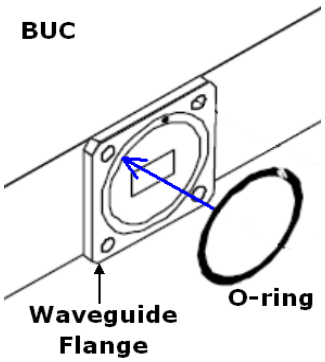
6.1. Mounting Configuration

The Unit can be mounted in the feed horn of the satellite antenna.

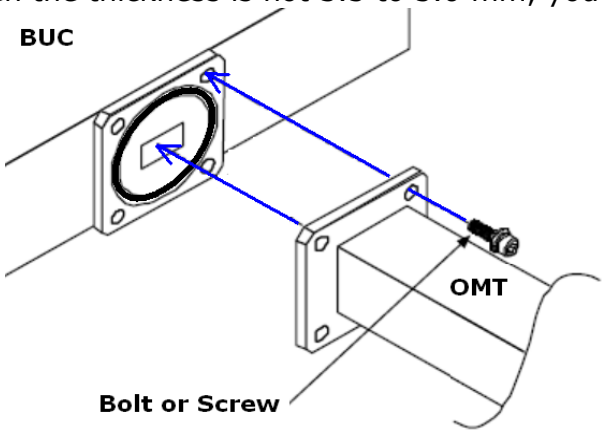
6.1.1. Guidelines for Attachment of OMT

When attaching the OMT or the filter, you should follow the following steps:

Step 1: Verify that the o-ring groove on the waveguide flange of the Unit is clean. Insert the enclosed o-ring (gasket) the groove as shown.



Step 2: Secure the OMT or the filter to the Unit using the supplied enclosed bolts with 1.15 to 1.4 N･m torque as shown, when the thickness of the flange of the OMT or the filter is 3.5 to 5.0 mm.
When the thickness is not 3.5 to 5.0 mm, you should prepare



6.1.2. Guidelines for Mounting

When mounting on the OMT or the filter, you should follow the following cautions:

- DO NOT block the fins and air flow.
- Normally the Unit should be mounted with fan face down.

6.2. Connecting System

The Unit is connected two cables:

- Coaxial Cable
- Power Cable
- Wire for Common Chassis Ground / Earthing
- M&C Signal Cable

6.2.1. Connecting Coaxial Cable

The Unit receives an IF signal and a reference signal via coaxial cable from modem, is required to supply +18 to +60 V DC power , receives an FSK communication M&C signal.

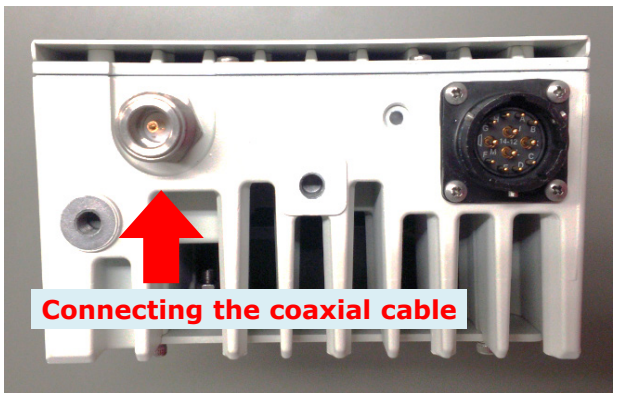
Connecting the coaxial cable is proceeded with the following steps:

Step 1: Connect the coaxial cable with N-type or F-type male connectors to the coaxial connector equipped with the Unit under following torque:
N-type connector, 0.68 to 1.13 N･m
F-type Connector, 0.39 to 0.49 N･m

Step 2: Use self-amalgamating tape to seal connector and cable entry points from the connector to the cable sheath.

Only input a voltage within the range indicated in specified voltage.
DO operate at the input voltage of +18 to +60 V DC power at the coaxial connector on the Unit.

DO NOT input an IF signal over the range of +13 dBm maximum and a reference signal within the range of -5 to +5 dBm.



6.2.2. Connecting Power Cable

The Unit is required to supply +18 to +60 V DC power via power cable from modem or a DC power supply unit with the exception of only IF connecter supplied models.

Connecting the power cable is proceeded with the following steps:

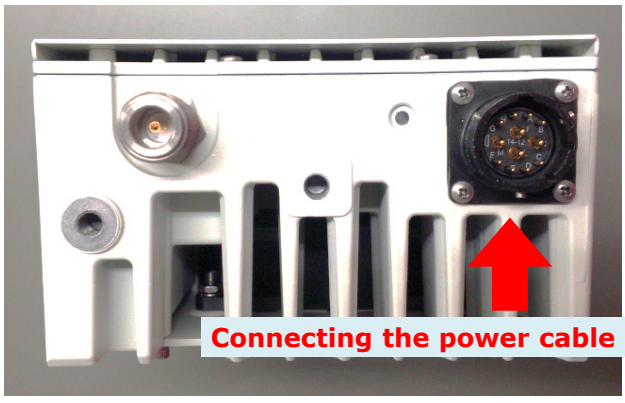
Step 1: Assemble the power cable and the supplied MS mating connector with the following assignment:
Pin J: Prime (+24 / +48 V DC Power)
Pin K: Prime Return
* *Do not connect the pins for N.C. and not using pins with the cable wires.*

Step 2: Connect the power cable above to MS connector equipped with a bayonet locked status.

Step 3: Use self-amalgamating tape to seal connector and cable entry points from the connector to the cable sheath.

Only input a voltage within the range indicated in specified voltage.
DO operate at the input voltage of +18 to 60 V DC power at the coaxial connector on the Unit.

DO NOT apply DC voltage via both MS Connector and N-/F-type Female Connector.
If DC voltage is applied on both connectors, it may damage the unit or the unit may not operate properly.

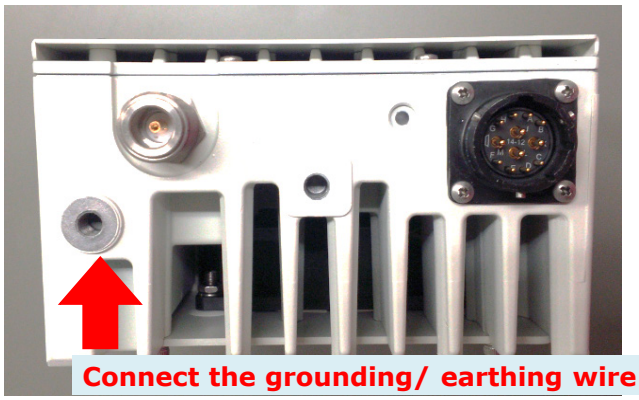


6.2.3. Wire for Common Chassis Ground / Earthing

The Unit can be had the chassis ground of the other equipment (e.g. antenna) in common or earthing.

Connecting the wire for common chassis ground / earthing is proceeded with the following steps:

Step 1: Connect the grounding/ earthing wire from ground on the other equipment or earthing point to the ground hole on connector or waveguide sides with M6 screw.



OR

6.2.4. Connecting M&C Signal Cable

The Unit is required to supply RS-232C interface signal via signal cable from modem or M&C equipment in case that it is RS-232C interface M&C models.

Connecting the M&C signal cable is proceeded with the following steps:

Step 1: Assemble the M&C signal cable and the supplied MS mating connector with the following assignment:

Pin G: RS-232C TxD
Pin H: RS-232C RxD
Pin K: GND COMMON (RS-232C)

* *Do not connect the pins for N.C. and not using pins with the cable wires.*

Step 2: Connect the M&C signal cable above to MS connector equipped with a bayonet locked status.

Step 3: Use self-amalgamating tape to seal connector and cable entry points from the connector to the cable sheath.

7. GUI of Monitor and Control

This Section describes the NJR's Graphical User Interface (GUI) of Monitor and Control.

The NJR's GUI is available for the RS-232C Interface M&C models.

The GUI uses the BUC-EP001 software which can be downloaded from the following NJR's website.

- Website: http://mc.njr.co.jp/eng/products/vsat/ku-buc/8w_2.html

Please download a zip file of the GUI software and decompress this

7.1. Setup

7.1.1. Connecting the RS-232C Interface

Connecting the the RS-232C Interface is proceeded with the following

Step 1: Assemble the cable and the supplied MS mating connector with the following assignment:
Pin G: RS-232C TxD
Pin H: RS-232C RxD
Pin K: GND COMMON (RS-232C)

Step 2: Connect the MS connector and the COM port of user's PC with the above cable.

7.1.2. COM Port Setting

Set the serial communication property of your PC as follows.
Baud rate: 9600
Data bit: 8
Parity: none
Stop bit: 1
Flow control: none

7.1.3. Installing the GUI Software

The GUI Software can be installed by Setup.exe in the downloaded zip file. The details of Installing the GUI software are mentioned in the user manual which is stored in Manual.htm in the downloaded zip file.

7.2. Starting and Operating

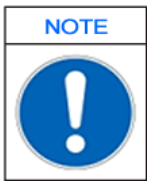
The details of starting and operating the GUI software are mentioned in the user manual which is stored in Manual.htm in decompressed folder.

8. Maintenance

This Section describes basic maintenance for the Unit.

8.1. Fan Field Replacement

The Unit is Forced Air by fan for cooling.



The fan has its lifetime. The fan is to be replaced with a new one at appropriate interval.
The recommendation interval of replacement is five years.

The fan of the Unit stop and does not operate normally, you need to replace a new fan by yourself in field. And the fan is to be replaced with a new one at five years interval.

Contact to us by phone, fax, or email, when a new fan for replacement is needed.

- Telephone: +81-49-278-1270
- Fax: +81-49-278-1234
- Email: mcsales@njr.co.jp
